

Peer Evaluation Guidance & Assessment Tips

In this activity, your evaluations of peer presentations should be approached as if you are the Kaluza CEO and Board of Directors. Here are some structured guidelines to help you focus on strategic insights rather than technical details, assessing how effectively the groups communicate value from an executive's perspective.

Key Assessment Areas

1. Context & Problem Framing

- Evaluate how well the group provides the context and background for their analysis.
- Look for clarity in defining the business problem, hypothesis, and any key predictions.
- Tip: Consider if the context feels aligned with a strategic business focus rather than getting too technical.

2. Approach & Methodology

- Assess if the team presents a clear, logical approach for their analysis without getting bogged down in technicalities.
- Check that the methods they describe align with solving the business problem effectively.
- Tip: Effective presentations for executives should touch on methodology only briefly, prioritizing insights and relevance to the problem.

3. Data Presentation & Visualization

- Observe whether the data presented enhances understanding, using appropriate figures, tables, or graphs.
- Look for succinct summaries of data trends rather than exhaustive technical details.
- Tip: Visuals should support clarity; check if trends and insights are immediately clear.

4. Insights & Conclusions

- Focus on the strategic relevance of the findings. Do the insights presented offer actionable information?
- Look for a well-articulated summary of findings, with a clear indication of whether hypotheses were supported or refuted.
- Tip: The best insights highlight key takeaways without overwhelming the audience with numbers.

5. Strengths & Limitations

- Evaluate how transparently the group addresses any limitations or potential errors in their analysis.
- Consider whether they provide a balanced view, acknowledging both the strengths and any caveats that may impact conclusions.
- Tip: Honest, strategic assessments can increase the presentation's credibility.

6. Presentation Quality & Structure

- Check if the presentation is logically organized, with smooth transitions and a clear flow of information.

- Evaluate the overall delivery, including the design of slides and the clarity of key messages.
- Tip: A well-structured presentation should engage the audience, focusing on actionable insights over exhaustive details.

Feedback & Constructive Critique

When providing feedback:

- Identify specific areas for improvement, focusing on aspects that would enhance clarity, strategic relevance, or audience engagement.
- Offer actionable suggestions that could help improve the group's pitch for future presentations.

Recall that you will engage with each presentation as a high-level executive, focusing on the strategic rather than technical elements and providing insights that would aid in a real-world business context.

Expectations for Peer Evaluation from the Client's Perspective

As you approach peer evaluations, remember that you are stepping into the shoes of Kaluza's CEO and Board of Directors. Here's a brief outline of our expectations to help you focus your feedback:

1. **Adopt a Strategic View:** Prioritize high-level, actionable insights over technical details. Imagine what would be most valuable to Kaluza's executives as they focus on the big picture.
2. **Clarity & Relevance:** Ensure your feedback is clear and directly relevant to the business problem. Aim for feedback that highlights key insights, avoiding overly detailed or technical responses.
3. **Constructive & Actionable Suggestions:** Provide feedback that is specific, helpful, and geared toward improvement. The goal is to guide your peers toward a more impactful presentation.
4. **Evaluate High-Level Methodology:** Comment on the appropriateness of their approach, staying at a high level rather than diving into technicalities.
5. **Visuals & Data Presentation:** Consider if the visuals support clarity and understanding from an executive perspective. Insights should be easily digestible and focused on trends.
